

Summary Views Problems

Last Modified on 09/11/2021 3:51 pm AEDT

Use the **Problems** tab in **Summary Views** to resolve a patient's current problems and review past and present problems. Summary Views can be accessed while in any clinical module and allows you to quickly view a patient's clinical history.

When you open a patient in clinical, the Summary View will appear on the lower left. You do not need to start an encounter.

Right-clicking a problem in Summary Views allows you to make the following updates:

- Add this Problem to the current encounter.
- Make Problem Resolved (for a current problem - see below).
- Make Problem Current (for resolved problems).
- Edit Problem Management Plan - so you can update your notes.
- Problem Maintenance - to take you back to the **Define Problem** screen.

To learn more see the [Add problem from ICPC](#), [Add existing/recent problem](#) or [Add problem using free text](#) article.

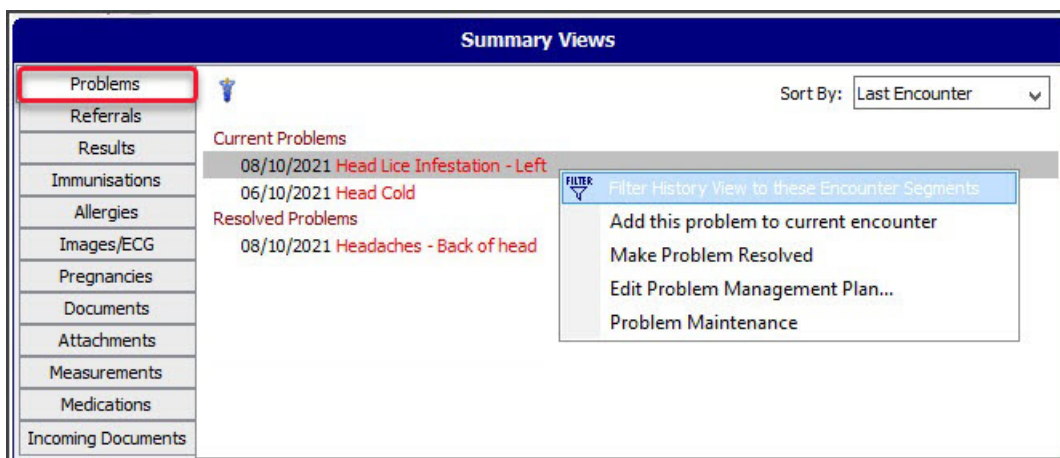

Resolve a problem

When a patient no longer has a problem, it should be set to resolved.

To resolve a problem:

1. Select the **Problems** tab in **Summary Views**.
2. Right-click the problem.
3. Select **Make Problem Resolved**.

The problem will now appear in the **Resolved Problems** section in Summary Views.

The screenshot shows the 'Summary Views' interface. On the left, a navigation menu has 'Problems' highlighted with a red box. The main area is divided into 'Current Problems' and 'Resolved Problems'. Under 'Current Problems', there are two entries: '08/10/2021 Head Lice Infestation - Left' and '06/10/2021 Head Cold'. A context menu is open over the '08/10/2021 Head Lice Infestation - Left' entry, showing options: 'Filter History View to these Encounter Segments', 'Add this problem to current encounter', 'Make Problem Resolved', 'Edit Problem Management Plan...', and 'Problem Maintenance'. The 'Sort By:' dropdown is set to 'Last Encounter'.
