

Adding a drug to Favourites

Last Modified on 23/01/2025 4:08 pm AEDT

Zedmed's **Drugs** module provides a **Favourites List** that each practitioner can add drugs to and use for all patients.

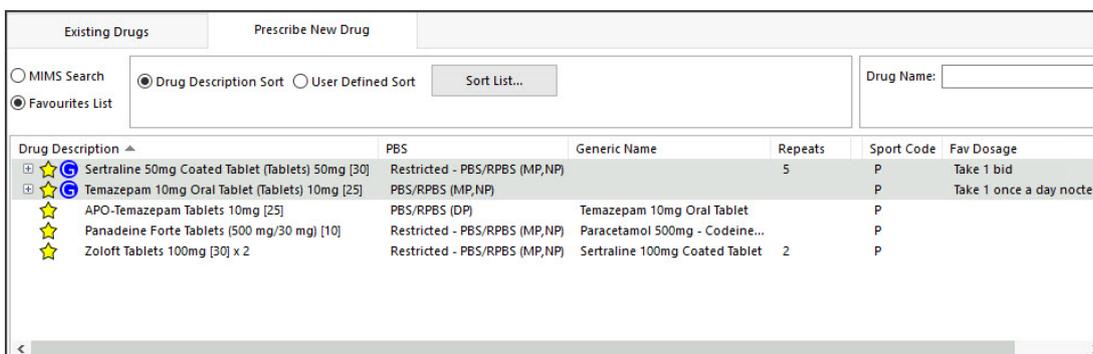

To add a favourite:

1. Search for then select the drug and open the **Script Details** screen.
2. Select dosage information if you want that information to be saved as well.
3. Select the **Add Favourite** button.

The screenshot shows the 'Script Details' window for 'Sertraline 100mg Coated Tablet 100mg [30] x 2'. The 'Add Favourite' button is highlighted with a red box. An information dialog box is open, stating 'Zoloft Tablets added to your Favourites List'.

When prescribing, select the **Favourites List**, and double-click the drug to open **Script Details** and prescribe.

The screenshot shows the 'Existing Drugs' window with the 'Favourites List' selected. The 'Add Favourite' button is highlighted with a red box.
