

Trimate AI

Version: 1 | Last Modified on 05/06/2026 12:15 pm AEST

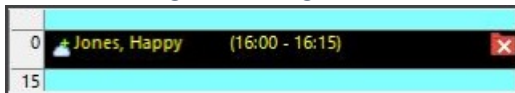

Zedmed supports **Trimate AI** with an API integration that allows Trimate agents to add bookings to Zedmed's Appointment Grid.

To learn more, see Trimate's webinar about their Zedmed integration and AI agent solutions.

How do AI Agents work with Zedmed

Any appointments made via the AI agent over the phone will be added to the Appointment Grid and indicated by a cloud icon. The first time a user makes an appointment using the AI agent over the phone, they will need to be reconciled with their patient record.

First-time AI Agent booking- cloud and + icon.

How do I manage patient bookings?

Follow the **Online Patient Reconciliation process** for first-time AI agent bookings. This guide explains the workflow for patients who make their first appointment using the AI phone agent and need to be reconciled with their patient record. This reconciliation only needs to be performed once. If the patient is new, a **patient record** will need to be created.

How to integrate Trimate AI with Zedmed?

Trimate will set up their integration for you. Part of the process involves creating an API user in Zedmed's security module and getting a copy of the database ID. That user account is only used to provide an API key and requires no action by the practice unless advised by support.
